

# SUGRU

By the time you read this you should have your free mini pack of Sugru in your hands! Woop!!

## WONDERING WHAT IN THE WORLD THIS STUFF IS?

Well let us explain ... sugru is the exciting new self-setting rubber that can be formed by hand. It feels like play-dough out of the pack, but this material is a little bit special. It bonds to most materials, and cures at room temperature overnight, turning into a strong and flexible silicone rubber. Its durable, waterproof properties make it great for outdoors and its soft touch and grippy structure lets you make handles and grips more comfortable. It's also stable at high and low temperatures, and you can even remove it from non-porous materials.

## WHAT'S OUR MISSION?

We believe that fixing, improving and making things should be easy and fun. Rather than having to buy new stuff all the time, we should be able to adapt, improve and repair things to make them work better for us. That's why we made sugru.

## SO WHAT WILL YOU DO WITH IT?

Our growing community of sugru-ers all over the world are sharing their projects with us – anything from improved GoPro mounts, bike hacks, fixed toys, and reassembled mugs – the possibilities are endless. Feeling excited, but need some inspiration? Turn over this page, there are 3 ideas to get you started.

Happy sugru-ing. Oh! And don't forget to let us know what you use your minipack for email [fix@sugru.com](mailto:fix@sugru.com) or tweet us a photo @sugru

Or email [susanne@sugru.com](mailto:susanne@sugru.com) mentioning Brighton Mini Maker Faire

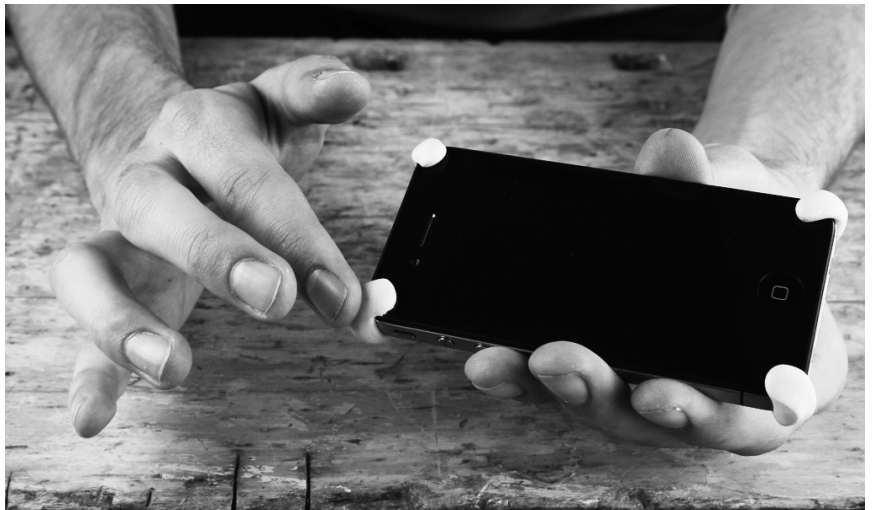

# PROJECTS
